

Problemen bij het aanklikken van de e-mail op de website is een gevolg van het ontbreken van de files **wldcore.dll** en **wldlog.dll** op uw computer

Oplossing:

Ga naar **C:\program files\windows live\shared** selecteer en copier de volgende files **wldcore.dll** en **wldlog.dll**

Ga dan naar :

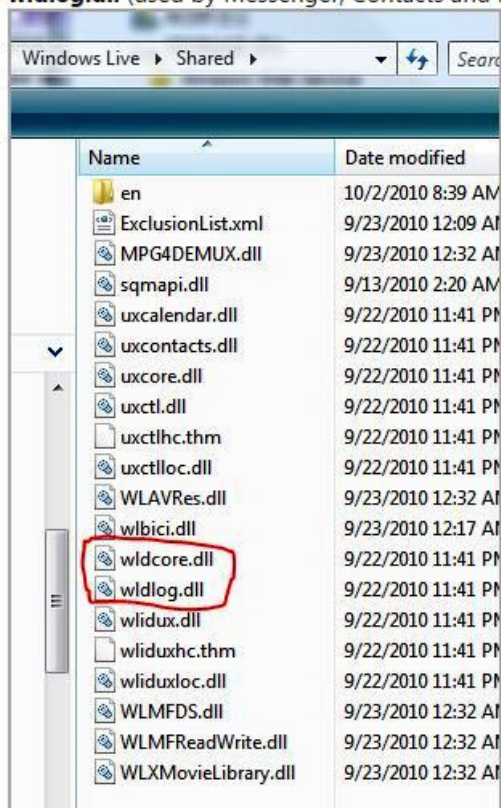

C:\program files\windows live\messenger (plak hier de files **wldcore.dll** en **wldlog.dll** in)

C:\program files\windows live\contacts (plak hier de files **wldcore.dll** en **wldlog.dll** in)

C:\program files\windows live\mail (plak hier de files **wldcore.dll** en **wldlog.dll** in)

Computer terug opstarten en het problem zou opgelost zijn.

After long day of research, at last I got the solution. It seems the new Windows Live has grouped the **wldcore.dll** and **wldlog.dll** (used by Messenger, Contacts and Mail) to a folder **c:\Program Files\Windows Live\Shared**

Maybe because I did upgrade install it screwed up things.

The solution was simply copy paste those 2 files **wldcore.dll** and **wldlog.dll** from **c:\Program Files\Windows Live\Shared** to

- **c:\Program Files\Windows Live\Messenger**
- **c:\Program Files\Windows Live\Contacts**
- **c:\Program Files\Windows Live\Mail**

Now I can login to Windows Live Messenger and enjoy the whole Windows Live Essentials 2011 products.
